Color Space and Color Gamut

Color Space - A color space is a specific organization of colors. In combination with physical device profiling, it allows for reproducible representations of color, in both analog and digital representations.

Color Gamut - The **color gamut** describes a range of **color** within the spectrum of **colors** that are identifiable by the human eye (visible **color** spectrum). The technology for modern day products to reproduce **colors** varies from device to device, with digital cameras, scanners, monitors, printers, tablets, projectors etc.

Adobe 1998, sRGB, Prophoto RGB

Monitors and *Color Drift*
